

Kadhir K G

Location: Tiruppur, Tamil Nadu, India

Email: kadhirk@gmail.com GitHub: github.com/kadhirkg LinkedIn: linkedin.com/in/kadhirkg

Objective

Aspiring Software Engineer with strong proficiency in Python, Java, and Full-Stack Development. Passionate about building scalable AI-powered applications, solving complex problems, and delivering efficient, reliable, and high-performance software solutions.

Education

B.Tech Information Technology	2023 – 2027
VSB Engineering College, Karur (Anna University)	CGPA: 7.89
Class XII – Viveham Higher Secondary School	2023
Percentage: 83%	
Class X – Viveham Higher Secondary School	2021
Percentage: 100%	

Skills

Programming Languages: Python, Java

Web / Backend: HTML, CSS, React.js, Node.js, Spring Boot, FastAPI, REST APIs

Tools & DevOps: Git, GitHub, Docker, Kubernetes, Grafana, Prometheus, VS Code

ML / Data: Machine Learning, scikit-learn, pandas, NumPy, SHAP, Explainable AI

Networking: TCP/IP, OSI Model, Subnetting, DNS, HTTP/HTTPS

Core Concepts: OOP, DSA, Full-Stack Development, Cloud & Network Fundamentals

Projects

CloudOS-RL – AI-Powered Multi-Cloud Scheduling System

Tech Used: Python, FastAPI, PPO (Reinforcement Learning), SHAP, Apache Kafka, React, Docker, Kubernetes, Prometheus, Grafana

Keywords: Multi-Cloud Scheduling, Workload Optimization, Explainable AI, SLA Compliance, Cost Optimization

- Developed an AI-driven multi-cloud scheduling platform using a PPO reinforcement learning pipeline with SHAP-based explainability, enabling intelligent workload distribution across AWS, Azure, and GCP with real-time optimization of cost, latency, and SLA compliance.
- Integrated Apache Kafka, Prometheus, and Grafana for a full-stack observability layer with streaming analytics and system-wide performance monitoring, containerized using Docker and Kubernetes.

Factory Twin – AI-Driven Industrial Monitoring Platform

Tech Used: React, FastAPI, PostgreSQL, scikit-learn, Docker, TailwindCSS, Prometheus

Keywords: Digital Twin, Industrial IoT, Predictive Maintenance, Anomaly Detection, Explainable AI, Real-Time Telemetry

- Built a full-stack industrial digital twin platform with real-time telemetry monitoring, AI-powered anomaly detection, predictive maintenance, and explainable root-cause diagnostics for accelerated operator response.
- Designed resilient React and FastAPI workflows with PostgreSQL and Docker, enabling scalable telemetry ingestion, stale data handling, and reliable real-time industrial operations.

Internship

Infosys Springboard Virtual Internship 6.0

Selected

Selected for a competitive national-level program by Infosys, gaining hands-on exposure to enterprise software development practices, industry workflows, and professional engineering standards.

Certifications

- | | |
|-------------------------------|------------|
| • Programming in Java – NPTEL | Score: 90% |
|-------------------------------|------------|

Achievements

- Secured 90% in NPTEL Programming in Java certification, demonstrating expertise in core Java, OOP, and algorithmic problem-solving.
- Selected for Infosys Springboard Virtual Internship 6.0, a highly competitive national-level program for top engineering students across India.
